

Beacon Technologies, a developer of interactive communication solutions, today announced that it is increasing the BEAM closed beta from 500 to 2,000 people.

BEAM, is a next-generation streaming platform that has been launched across the globe, and will usher a new era of interactivity for streamers. Viewer experience and control options are unlike anything else. BEAM will also have built-in monetization and production tools designed to drive engagement between streamers and viewers.

*Teodor Atroshenko, CTO of Mass Luminosity, said, "We've created BEAM with the goal of applying our suite of patented and patent-pending innovations to a high-definition streaming platform. The positive feedback we've received during our initial beta tests has been very encouraging, and the entire team is focused on providing experiences that could surpass expectations."*

Beacon Technologies, Inc., a wholly-owned subsidiary of Mass Luminosity, Inc., was incorporated in November 2020. Beacon Technologies is the developer of Beacon MAX, a premium advanced suite of communication services, and BEAM, a revolutionary streaming service. Beacon Technologies holds a number of patents that power its next-generation technologies.
